Relocation of the cold triple axis spectrometer FLEXX to MLZ, Munich: Larmor diffraction and inelastic scattering

Dienstag, 17. September 2024 22:40 (20 Minuten)

The cold triple-axis spectrometer (TAS) FLEXX at HZB is a well-designed and upgraded instrument [1-4]. There was a strong wish that this excellent instrument should be preserved for the community. One attractive gap in the present instrumentation suite of MLZ, is the Larmor-diffraction technique [5-6] (LD) and, as a natural extension, cold neutron resonant spin echo (NRSE). TAS comes at no extra cost, as it is the main backbone of such an instrument.

The instrument will be placed on a cold neutron guide. Further, new developments are under way to allow for application of magnetic fields at the sample, hitherto not possible [7-9]. This opens up new vistas in the exploration of materials. A last attractive option is the possibility to combine high magnetic fields together with cold TAS.

I apply for the best Poster Poster Award

Hauptautoren: SKOULATOS, Markos (Forschungs- Neutronenquelle Heinz Maier-Leibnitz (FRM II)); GEORGII, Robert (MLZ - TU München); KELLER, Thomas (MPI für Festkörperforschung)

Vortragende(r): SKOULATOS, Markos (Forschungs- Neutronenquelle Heinz Maier-Leibnitz (FRM II))

Sitzung Einordnung: Mounting Posters, Beer and light Dinner

Track Klassifizierung: Instrumentation & Data Management
